About WTTC and Oxford Economics ................................................................. 21
Introduction

• The World Travel & Tourism Council (WTTC) has spearheaded global analysis of the economic importance of the sector for over 20 years. This research has established the contribution of Travel & Tourism on an ongoing basis to over 180 countries in absolute size, share of the economy, and growth.

• Around the world, WTTC research is referenced as the authoritative source of the role of Tourism in generating GDP, income, and employment.

• WTTC is now releasing new research on the role that Travel & Tourism plays in the world economy in comparison to other economic sectors.

• The results of these comparisons provide new perspectives on the relative significance of Travel & Tourism as well as some of its unique advantages in driving current and future global economic growth.
Summary of Research Structure

- This updated WTTC research benchmarks Travel & Tourism against an assortment of other sectors for twenty-five countries and for each world region.

**Regions**
- World
- Americas
- Europe
- Asia Pacific
- Middle East
- Africa

**Countries**
- Argentina
- Australia
- Brazil
- Canada
- China
- Colombia
- France
- Germany
- India
- Indonesia
- Italy
- Jamaica
- Japan
- Mexico
- Montenegro
- Peru
- Russia
- Serbia
- South Africa
- South Korea
- Thailand
- Turkey
- UAE
- United Kingdom
- USA
Summary of Research Structure

The following metrics are analysed by sector for each country:

- GDP (size and share of economy)
- Employment contribution (size and share of economy)
- Historic growth
- Expected growth
- Export contribution
- Strength of linkages to the rest of the economy
Sectors referenced

The following sectors have been analysed in comparison to Travel & Tourism. They were selected as having a similar breadth and global presence as Travel & Tourism.

- **Mining**: includes the extraction of oil, natural gas, coal, metals, and related services
- **Education**: includes all levels of educational services
- **Higher Education**: includes learning that occurs at universities, academies, colleges, seminaries, and institutes of technology
- **Chemicals manufacturing**: includes drugs & medicines, manufacture of basic pharmaceutical products and pharmaceutical preparations, plastics, rubber, paint, polishes, ink, perfumes, cosmetics, soap, cleaning materials, fertilizer, pesticides, other chemicals
- **Automotive manufacturing**: includes motor vehicles and parts & accessories
- **Communications**: includes post (national and private) and telecommunications
- **Banking**: includes all banking activities and related services.
- **Financial services**: includes banking, investment services, insurance
The analysis examines the economic value of industries on three levels.

- **Direct**: this includes only those employees and the related value added for the relevant sector. In the case of Travel & Tourism, we only count the value added of the accommodation, recreation, transportation, and other related sectors.

- **Indirect**: this measures the supply chain impact (also called inter-industry linkages) for each sector.

- **Induced**: this measures the impacts of incomes earned directly and indirectly as they are spent in the local economy.

- The sum of direct, indirect, and induced impacts equals the total economic impact of a sector.
Australia

How does Travel & Tourism compare to other sectors?
Benchmarking Travel & Tourism in Australia: GDP

GDP Size
- Travel & Tourism generated a total impact of $US 153 billion of Australia’s GDP in 2013.
- Travel & Tourism’s direct contribution to GDP impact is nearly equivalent to Australia’s communication sector and is greater than the automotive, higher education, and chemicals manufacturing sectors.
- Travel & Tourism’s total GDP impact is approximately 30% greater than the total impact on GDP of the communication services sector.

GDP Share
- Based on its direct, indirect, and induced GDP impact, Travel & Tourism generated 9.8% of Australia’s GDP in 2013.
- This is larger than the size of communication services’ and chemicals manufacturing GDP impact at 7.6% and 3.1%, respectively.

**Benchmarking Travel & Tourism in Australia: Employment**

### Employment Size
- Travel & Tourism sustained a total of 1.4 million direct, indirect, and induced jobs in Australia in 2013.
- Travel & Tourism in Australia directly employs more people than every sector in this study except for education.

### Employment Share
- Travel & Tourism generated, either directly or indirectly, 12.3% of employment in Australia in 2013.
- For every job directly in the Tourism sector, nearly two jobs are created on an indirect or induced basis, making its linkages stronger than in the education sector.

Benchmarking Travel & Tourism in Australia: Growth

Growth Trends
- Travel & Tourism direct industry GDP expanded 68% between 1990 and 2013 while the total economy expanded 103%.
- This growth exceeded that of the education, chemicals manufacturing, and automotive manufacturing sectors.

Growth Forecasts
- Travel & Tourism GDP is expected to grow at an annual average of 2.8% over the next decade.
- In comparison, the total economy is expected to expand 1.8% per annum in real, inflation-adjusted terms.

Australia GDP Growth by Sector (1990=100)

Australia GDP Forecast by Industry
CAGR% 2013-2023
Tourism’s Share of Exports

- Travel & Tourism is a significant source of export revenue for Australia.
- In 2013, visitor exports totalled $22.2 billion. This was 41% of all service exports and 7.3% of all exports (including goods and services).

Growth of Tourism Exports

- Between 2000 and 2013, Australia’s Travel & Tourism exports expanded 109%.
- Total exports of goods and services outpaced Travel & Tourism exports and grew 265% between 2000 and 2013.

Australia Exports Growth, 2000-2013
(2000=100)
Comparing the effect of $1 million in spending

- Spending in a sector will have varying impacts on GDP, depending on the local value added and linkages to the rest of the economy.

- In Australia, $1 million in Travel & Tourism spending (consumption) generates $1.5 million in GDP. This is nearly the same impact as the financial services sector.

How much of T&T spending stays in the economy?

- When travellers spend money in a destination, not all of it remains in the economy as some goods and services need to be imported. This represents “leakage” to the economic value produced.

- In Australia, a mere 12% of Travel & Tourism spending leaks out of the economy through imports. The auto manufacturing industry requires imports amounting to 27% of sales.

Impact of $1m spending - Australia

Leakages per $100 spend - Australia
Travel & Tourism is interconnected with the entire Australian economy. These links exist through the supply chain to the Tourism industry (indirect linkages) as well as through Tourism-earned incomes as they are spent across a variety of other sectors.

In this sense, the Travel & Tourism sector has many “beneficiary” sectors across the whole spectrum of the economy.

For every $1 million in Travel & Tourism sales, $179,000 of GDP is generated in the real estate sector.

The wholesale and retail sector gains $151,000 for every $1 million in spending on Travel & Tourism.
Travel & Tourism’s employment potential

- For every $1 million in Travel & Tourism spending, 15 jobs are supported. (5 direct, 7 indirect, and 3 induced)
- This compares favourably to the average of the economy, which generates 9 jobs per $1 million in spending.
- Financial services: 8 jobs per $1 million
- Agriculture: 9 jobs per $1 million
- Auto manufacturing: 8 jobs per $1 million
- Chemicals: 7 jobs per $1 million

Data Sources & Methodology

How does Travel & Tourism compare to other sectors?
Data sources and methodology: GDP and Employment

• Main data sources for comparative sectors:
  • United Nations International Labour Organization;
  • OECD;
  • CEIC Data Manager;
  • Eurostat (European Commission);
  • UK Office for National Statistics (ONS);
  • Oxford Economics Cities and Regions Forecasting Service;
  • UNESCO;
  • Groningen Growth and Development Centre;
  • UN World Input-Output Database (WIOD);
  • Oxford Economics Global Industry Model;
  • Oxford Economics Global Economic Model;
  • Oxford Economics UK Regional Model; and
  • Various country-specific National Statistics Office websites

• Travel & Tourism GDP and employment figures are drawn from Oxford Economics analysis for WTTC using the Tourism Satellite Account framework.
Data sources and methodology: Exports

• Main data sources:
  • World Trade Organization (WTO)
  • IMFBOPA
  • Oxford Economics.

• Total exports, total service exports and total goods/merchandise exports are sourced originally to national accounts and central bank balance of payments data.

• Service exports taken from IMFBOPA database for all countries where possible.

• 2000 figures taken from above, 2013 estimated using 2012 shares of total and applied to totals for 2013.

• All currency figures are stated in 2012 US dollars.
### Data sources and methodology: Linkages

- **Main data sources:** OECD, National Statistical Offices, Oxford Economics

- Input-output tables for all countries were sourced from either the OECD or, when not available, National Statistical Offices. From the input-output tables, multiplier matrices were developed for each economy, detailing the flow of spending in an economy that occurs as a consequence of spending in a given industry.

- For each of the comparator sectors, a spending shock of $1 million was simulated, with the resulting spending impacts in every industry in the economy recorded.

- These spending outcomes were translated into gross value added (GVA) using the GVA/output ratios available in the input-output tables, and employment, using productivity level data developed from the GDP and employment figures derived elsewhere in the study.

- Travel & Tourism multipliers are drawn from Oxford Economics / WTTC ongoing Tourism Satellite Account analysis.

- Global and regional multipliers were calculated as the weighted average of all relevant nations, with weightings assigned according to sector GDP.
The World Travel & Tourism Council (WTTC) is the forum for business leaders in the Travel & Tourism industry. With Chief Executives of some one hundred of the world’s leading Travel & Tourism companies as its Members, WTTC has a unique mandate and overview on all matters related to Travel & Tourism.

WTTC works to raise awareness of Travel & Tourism as one of the world’s largest industries, supporting 260 million jobs and generating 9 per cent of world GDP in 2012.

WTTC advocates partnership between the public and private sectors, delivering results that match the needs of economies, local and regional authorities and local communities with those of business.

Oxford Economics is one of the world’s leading providers of economic analysis, forecasts and consulting advice. Founded in 1981 as a joint venture with Oxford University’s business college, Oxford Economics enjoys a reputation for high quality, quantitative analysis and evidence-based advice.

For this, it draws on its own staff of over 70 highly-experienced professional economists; a dedicated data analysis team; global modeling tools, and a range of partner institutions in Europe, the US and in the United Nations Project Link. Oxford Economics has offices in New York, Philadelphia, San Francisco, Chicago, London, Oxford, Belfast, Dubai, and Singapore.
