HOW DOES TRAVEL & TOURISM COMPARE TO OTHER SECTORS?

GDP: SIZE

- Travel & Tourism generated a total contribution of $209 billion to India’s GDP in 2016.
- Travel & Tourism’s total GDP impact is larger than that of the chemicals manufacturing, automotive manufacturing, and mining sectors.
- In terms of its direct GDP, Travel & Tourism is more than four times the size of the automotive manufacturing industry in India.

GDP: SHARE

- Based on its direct, indirect, and induced GDP impact, Travel & Tourism generated 9.6% of India’s GDP in 2016.
- This is larger than the size of the chemicals manufacturing sector’s GDP impact at 6.5%.
EMPLOYMENT: SIZE

- Travel & Tourism sustained a total of 40.3 million direct, indirect, and induced jobs in India in 2016.
- Travel & Tourism in India directly employs more people than every sector in this study except for the construction, retail, and agriculture sectors.
- Of note, Travel & Tourism directly supports more than six times as many jobs as the financial services sector and nearly twelve times as many jobs as the mining sector.

EMPLOYMENT: SHARE

- Travel & Tourism generated, either directly or indirectly, 9.3% of India’s employment in 2016.
- For every job directly in the Tourism sector, nearly one additional job is created on an indirect or induced basis, making its linkages stronger than in the construction sector.

GROWTH: TRENDS

- Travel & Tourism direct sector GDP expanded 176.7% between 1997 and 2016 while the total economy expanded 259.6%.
- The agriculture industry expanded 87.2% and the mining industry expanded 114.3% over this 19-year period.

GROWTH: FORECAST

- Travel & Tourism GDP is expected to grow at an annual average of 6.8% over the next decade.
- In comparison, the total economy is expected to expand 6.1% per annum while the mining and agriculture sectors are forecast to grow 1.5% and 3.4% per annum, respectively, in real, inflation-adjusted terms.

#### Exports: Travel & Tourism Share of Exports
- Travel & Tourism is a significant source of export revenue for India.
- In 2016, visitor exports totaled $22.8 billion. This was 14.1% of all service exports and 5.3% of all exports (including goods and services).

#### Exports: Growth of Travel & Tourism Exports
- Between 1997 and 2016, India’s Travel & Tourism exports expanded 688%.
- Total exports of goods and services outpaced Travel & Tourism Exports and grew 853% between 1997 and 2016.
**INDIA IMPACT OF SIM SPENDING**
GDP ($ million)

**Employment: Size**

**Comparing the Effect of $1 Million in Spending**

- Spending in a sector will have varying impacts on GDP, depending on the local value added and linkages to the rest of the economy.
- In India, $1 million in Travel & Tourism spending (consumption) generates $1.3 million in GDP. This is roughly the same impact as the mining and communications sectors.

**How Much of Travel & Tourism Spending Stays in the Economy?**

- When travellers spend money in a destination, not all of it remains in the economy as some goods and services need to be imported. This represents “leakage” to the economic value produced.
- In India, a mere 10% of Travel & Tourism spending leaks out of the economy through imports. The chemicals industry requires imports amounting to 22% of sales.

**Beneficiaries of Travel & Tourism**

- Travel & Tourism is interconnected with the entire Indian economy. These links exist through the supply chain to the Tourism industry (indirect linkages) as well as through Tourism-earned incomes as they are spent across a variety of other sectors.
- In this sense, the Travel & Tourism sector has many “beneficiary” sectors across the whole spectrum of the economy.
- For every $1 million in Travel & Tourism sales, $189,000 of GDP is generated in the agriculture sector.
- The wholesale and retail sector gains $109,000 for every $1 million in spending on Travel & Tourism.

**Travel & Tourism’s Employment Potential**

- For every $1 million in Travel & Tourism spending, 407 jobs are supported. (258 direct, 94 indirect, and 55 induced)
- This compares favourably to the average of the economy, which generates 599 jobs per $1 million in spending.
- Financial services: 329 jobs per $1 million
- Auto manufacturing: 315 jobs per $1 million
- Communications: 381 jobs per $1 million
- Chemicals: 231 jobs per $1 million

**METHODOLOGY**

The World Travel & Tourism Council (WTTC) has spearheaded global analysis of the economic importance of the sector for over 25 years.

This research has established the contribution of Travel & Tourism on an ongoing basis to over 180 countries in absolute size, share of the economy, and growth. Around the world, WTTC research is referenced as the authoritative source of the role of Travel & Tourism in generating GDP, employment, exports, and investment. This research compares the role that Travel & Tourism plays in the world economy with other economic sectors. The results of these comparisons provide new perspectives on the relative significance of Travel & Tourism, as well as some of its unique advantages in driving current and future global economic growth.

This updated WTTC research benchmarks Travel & Tourism against an assortment of other sectors for 27 countries and for each world region.

The following metrics are analysed by sector for each country and region:
- GDP (size and share of total)
- Employment contribution (size and share of total)
- Historic growth
- Expected growth
- Export contribution

And for most of the countries:
- Strength of linkages to the rest of the economy
- Job creation potential

The following sectors have been analysed in comparison to Travel & Tourism. They were selected as having a similar breadth and global presence as Travel & Tourism.

**AGRICULTURE:** agriculture, forestry, and fishing.
**AUTOMOTIVE MANUFACTURING:** motor vehicles and parts & accessories.
**BANKING:** all banking activities and related services.
**CHEMICALS MANUFACTURING:** drugs & medicines, manufacture of basic pharmaceutical products and pharmaceutical preparations, plastics, rubber, paint, polishes, ink, perfumes, cosmetics, soap, cleaning materials, fertilizer, pesticides, other chemicals.
**CONSTRUCTION:** those primarily engaged in the construction of buildings (both residential and non-residential), engineering projects or speciality trade contractors. Construction work done may include new work, additions, alterations, or maintenance and repairs.
**FINANCIAL SERVICES:** all financial relates activities including banking, investment services, and insurance.
**MINING:** the extraction of oil, natural gas, coal, metals, and related services.
**RETAIL (WITHOUT WHOLESALE):** all retail trade (i.e. retail trade, except of motor vehicles & retail codes to motor vehicles and motorcycles).

The analysis examines the economic value of industries on three levels:

**DIRECT**
This includes only those employees and the related value added for the relevant sector. In the case of Travel & Tourism, we only count the value added of the accommodation, recreation, transportation, and other related sectors.

**INDIRECT**
This measures the supply chain impact (also called inter-industry linkages) for each sector.

**INDUCED**
This measures the impacts of incomes earned directly and indirectly as they are spent in the local economy.

The sum of direct, indirect, and induced impacts equals the total economic impact of a sector.
## DATA SOURCES

All currency figures are stated in 2016 US dollars.

### GDP & EMPLOYMENT

Main data sources for comparative sectors:
- United Nations International Labour Organization
- OECD
- CEIC Data Manager
- Eurostat (European Commission)
- UK Office for National Statistics (ONS)
- Oxford Economics Cities and Regions Forecasting Service
- UNESCO
- Groningen Growth and Development Centre
- UN World Input-Output Database (WIOD)
- Oxford Economics Global Industry Model
- Oxford Economics Global Economic Model
- Oxford Economics UK Regional Model
- Various country-specific National Statistics Office websites
- Travel & Tourism GDP and employment figures are drawn from Oxford Economics analysis for WTTC using the Tourism Satellite Account framework.

### EXPORTS

Main data sources:
- World Trade Organization (WTO) for global goods and services exports
- IMFDOT for total goods exports by country
- IMFBOPA and ITC for total services exports by country
- National accounts and central bank balance of payments data (from national sources) complement our database where data from above sources is unavailable
- Oxford Economics estimates to fill gaps in historical data
- Data is generally available for 2000-2015 from above sources. Missing years and projected 2016 figures are estimated using available data on industry and trade.

### LINKAGES (SELECTED COUNTRIES ONLY)

Main data sources:
- OECD, National Statistical Offices, Oxford Economics;
- Input-output tables for all countries were sourced from either the OECD or, when not available, National Statistical Offices. From the input-output tables, multiplier matrices were developed for each economy, detailing the flow of spending in an economy that occurs as a consequence of spending in a given sector;
- For each of the comparator sectors, a spending shock of $1 million was simulated, with the resulting spending impacts in every sector in the economy recorded;
- These spending outcomes were translated into gross value added (GVA) using the GVA/output ratios available in the input-output tables, and employment, using productivity level data developed from the GDP and employment figures derived elsewhere in the study;
- Travel & Tourism multipliers are drawn from Oxford Economics / WTTC ongoing Tourism Satellite Account analysis; and,
- Global and regional multipliers were calculated as the weighted average of all relevant nations, with weightings assigned according to sector GDP.

ABOUT OXFORD ECONOMICS

Oxford Economics is one of the world’s leading providers of economic analysis, forecasts and consulting advice. Founded in 1981 as a joint venture with Oxford University’s business college, Oxford Economics enjoys a reputation for high quality, quantitative analysis and evidence-based advice.

For this, its draws on 250 full-time staff including 150 highly-experienced professional economists; a dedicated data analysis team; global modelling tools, and a range of partner institutions across the globe. Oxford Economics has offices in Oxford, London, New York, Singapore, Belfast, Chicago, Dubai, Miami, Milan, Paris, Philadelphia, San Francisco, and Washington DC.

ABOUT AMERICAN EXPRESS

American Express is a global services company, providing customers with access to an array of charge, credit, pre-paid and co-brand cards for consumers and small businesses. Additionally, American Express Travel offers unique travel and concierge services to premium card members through its Platinum, Gold, and Centurion travel and lifestyle services. American Express also offers a suite of B2B and T&E payment solutions through its Global Corporate Payments division that help organizations streamline processes and transform them into opportunities for savings, control and efficiency.

ABOUT WORLD TRAVEL & TOURISM COUNCIL

WTTC promotes sustainable growth for the sector, working with governments and international institutions to create jobs, to drive exports, and to generate prosperity. Council Members are the Chairs, Presidents, and Chief Executives of the world’s leading private sector Travel & Tourism businesses.

WTTC works to raise awareness of Travel & Tourism as one of the world’s largest industries, supporting 292 million jobs and generating 10.2% of global GDP in 2016.
